Computer Science Colloquium

Date: Oct. 27, 2014. 3:30 – 4:20 PM

Place: JEB 328

Speaker: Corey Thuen, Digital Bond

Who is Invited? Everyone!

Title: Things my mama never taught me about startups: A tale from the trenches

Abstract

The phrase "startup company" can invoke a lot of feelings and ideas. This talk is a "tales from the trenches" discussion about what it means to run your own company and explore the challenges and rewards that can be expected. We will also discuss open source software development and the ethics, obligations, and potential pitfalls therein. Afterward, you should have a better idea about the things your mama never told you about software startups.

Bio

Corey Thuen is a cybersecurity researcher for Digital Bond, an Industrial Control System security company. Previously, Corey founded Southfork Security which did vulnerability assessments and developed open source network monitoring tools. Corey has first-hand experience with the issues, challenges, and legalities of running a startup company and working with open source software.
